JAY KELUSKAR

AL&ML ENGINEER

INTERESTS :
Data Structures & Algorithms | AI / Machine Learning | Backend Development | Open-Source Contribution | Robotics

CONTACT

SKILLS

Technical Skills :

- Programming & Development
- C Programming
- Data Structures & Algorithms (DSA)
- Java (OOP, Swing/Applet)
- Python Programming
- SQL / MySQL
- Python–SQL Integration
- HTML & CSS (Basics)
- Technologies & Concepts
- Algorithms & Problem-Solving
- Multi-threading & Synchronization
- OpenCV (Computer Vision)
- YOLO (Object Detection – Ongoing)
- Software–Hardware Integration

Professional Skills :

- Strong Presentation Skills
- Leadership

PROFILE

Second-year Computer Engineering student focused on Python-based system development, Data Structures & Algorithms, and SQL/MySQL–driven application design. Actively solving DSA problems on LeetCode to strengthen algorithmic thinking and optimization skills. Experienced in building modular, end-to-end projects including analytical systems, prediction models, and simulations, with strong Python–SQL integration. Possesses working knowledge of Java (OOP concepts) and is expanding expertise in computer vision (OpenCV, YOLO) and AIML fundamentals, with a focus on practical, scalable solutions.

TECHNICAL PROJECTS & HANDS-ON EXPERIENCE

C Programming & DSA

- Implemented core Data Structures and Algorithms in C (stacks, queues, linked lists, trees, graphs) through real-world simulations and system-based projects.
- Designed applications such as a UTS App adaptation (distance and fare calculation with route logic) and a Library Management System using linked lists and file handling.
- Actively practicing DSA on LeetCode using a structured learning approach: understanding concepts and reference solutions first, manually writing algorithms and code for clarity, implementing and testing in an IDE (Dev-C++), submitting solutions on LeetCode, maintaining a documented solution repository, and periodically revising concepts after every 30–50 problems.

Python Programming & SQL Integration

- Advanced from basic to intermediate Python, with hands-on work in automation, structured data handling, and modular programming.
- Built a Scientific Calculator in Python with advanced mathematical and logical functionalities.
- Developed a Stock Insights Analysis System using Python + SQL, performing volatility, risk, and comparative analysis of major Indian companies.
- Created a Football Match Outcome Prediction Model using historical and statistical data.[First Implementation of ML]
- Engineered a Football Match Highlights Analyzer, generating processed videos, heatmaps, and minimap-based tactical visualizations.
- Currently developing a Space Domain Analytics project using NASA APIs for research-oriented data analysis.

Database & Backend Development

- Built a strong base in SQL/MySQL, covering schema design, queries, joins, and optimization.
- Integrated SQL with Python to implement CRUD operations and reporting dashboards.
- Exploring database-focused courses to deepen backend expertise.

Continuous Learning & Exploration

- Actively pursuing courses in DSA, AIML, Python, SQL, and emerging technologies (ongoing, no certificates yet).
- Experimenting with indirect prompt engineering and AI workflows to align with modern development paradigms.

EDUCATION

Vidyalankar Institute of Technology, Mumbai University
B.Tech - Computer Engineering | 2024 – Present

- Current CGPA: 9.61 (First Year : Sem 1 & 2) - 9.7 (Second Year : 3rd Sem)
- Specializations: Algorithmic Problem-Solving & DSA, Object-Oriented & Modular Programming, Database-Driven Application Development, AI/ML & Intelligent Systems Exploration, Full-Stack Foundations

Higher Secondary Education (HSC), Maharashtra State Board

- 2023 – 2024 | 77% (**PCM + CS**)

Junior College (11th), Maharashtra State Board

- 2023 | 86% (**PCM + CS**)

Secondary School Certificate (SSC), Maharashtra State Board

- 2022 | 94.40%
